Carbon Reduction Plan

Supplier Name: Proveca Ltd

Publication Date: 06/11/2026

1. Commitment to achieving net zero

Proveca is committed to achieving net zero emissions by 2045.

2. Baseline and current emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured. As 2025 is the first reporting period for which Proveca has calculated emissions, it is both the baseline and current emission footprint.

Baseline and Reporting Year: 2025	
Emissions	**Total (tCO2e)**
Scope 1	**59.97**
Scope 2	**2.56**
Scope 3 (included sources)	**2,692.00**
3.1 Purchased goods and services	2,086.05
3.2 Capital goods	8.08
3.3 Fuel- and energy-related activities	16.17
3.4 Upstream transportation and distribution	9.10
3.5 Waste generated in operations	0.66
3.6 Business travel	421.09
3.7 Employee commuting	56.61
3.9 Downstream transportation and distribution	33.82
3.12 End-of-life treatment of sold products	0.12
3.15 Investments	60.30
Categories 3.8, 3.10, 3.11, 3.13, and 3.14	Not relevant
Total Emissions	**2,754.54**

3. Reasons for exclusions of scope 3 categories

3.8 Upstream leased assets - office energy use is already reported under Scope 1 and 2.
3.10 Processing of sold products - Proveca sells finished medicines that need no further processing.
3.11 Use of sold products - medicines use no energy when taken, so there are no direct use-phase emissions.

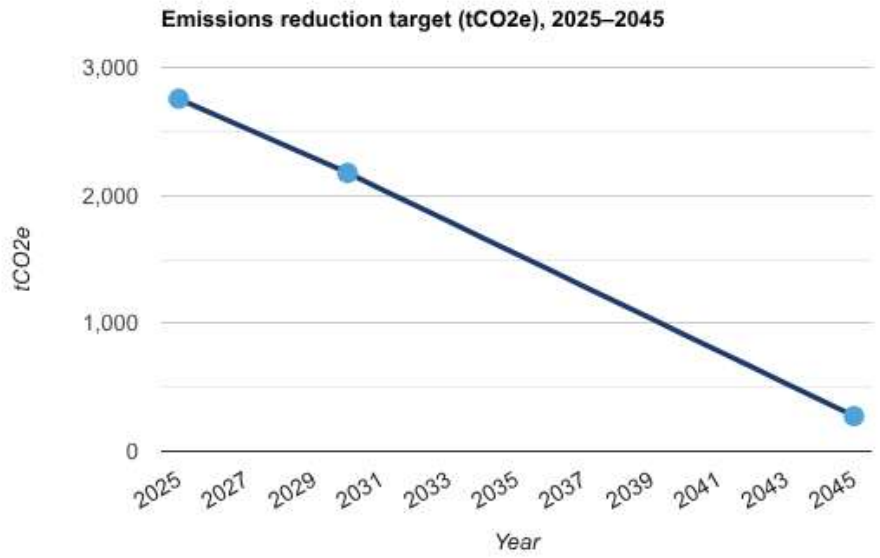

3.13 Downstream leased assets - Proveca does not lease out any assets to other organisations.

3.14 Franchises - Proveca does not operate any franchises.

4. Emissions reduction targets

In order to continue our progress to achieving net zero, we have adopted the following carbon reduction targets:

- We commit to reduce combined Scope 1, 2 and 3 emissions by 21% by 2030 from the 2025 baseline.
- We commit to reduce combined Scope 1, 2 and 3 emissions by 90% by 2045 from the 2025 baseline

5. Carbon reduction projects

5.1. Completed carbon reduction initiatives

2025 is the first year of Proveca measuring its emissions. Proveca's existing initiatives and working practices can be assumed to have lowered emissions, but in an absence of measurements before and after those initiatives have been implemented the footprint will not capture those reductions. Existing initiatives and working practices that have lowered emissions include:

- Optimising inbound and outbound logistics by consolidating shipments and choosing road or sea freight over air freight where product requirements allow.
- Hybrid working model in place for all staff to reduce travel and commuting.
- Hot-desking policy within Proveca offices reduces office space requirements and associated energy consumption.
- Designing multilingual product packs to reduce waste and number of manufacturing campaigns required.
- Cycle to work scheme available.

5.2. Future carbon reduction initiatives

Proveca understands the need to reduce emissions in line with the NHS' own net zero targets. In the future we hope to implement further measures such as:

- Engaging our contract manufacturing organisations (CMOs) to obtain product-specific emissions data where possible.
- Including carbon and sustainability criteria in CMO selection, tendering and contract renewals.
- Working with research and development partners and consultancies to understand and reduce the emissions associated with outsourced R&D activities.
- Designing products with sustainability in mind, where possible, for all packaging.
- Consider increasing the use of recyclable or recycled packaging materials.
- Reviewing our existing travel policies to encourage sustainable travels where possible.
- Launching an internal ESG Manual to provide guidance, alongside training for all staff on carbon literacy, our carbon reduction plan and how their contributions support emissions reduction.
- Reviewing our facilities strategy to identify opportunities to optimise our offices and associated carbon emissions.

6. Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.
Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard[1] and uses the appropriate government emission conversion factors for greenhouse gas company reporting[2].

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements (where required), and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard[3].

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier: **Date:**
